- The program developed at that time was an AI program that checked the immigration of the airport
- Checked for errors in the program by doing Unit Testing and Manual Testing, reported the test results, tried to solve the problem until the quality was as the customer wanted and could be delivered on time

THESIS

Thesis Title: Card Access Control System

This thesis proposes a card access control system in a cabinet format using RFID for user data reading. It involves developing a web application with Flutter and Firebase, and utilizing Arduino Uno R3 to display entry-exit status, total user count, and user information, including roles at each location.
